

Neurotunnel State Tunnel

Adaptive light-acoustic environment for cultural institutions

Format: architectural installation and spatial service

Authors: Alena Levitskaya (architect, AB "Structure")
Valery Latypov (physicist, visual artist)

Idea

A gateway between city noise and attention to art.

Visitors arrive at a museum or theater overloaded, their perception closed before they even reach the exhibition.

Neurotunnel solves this spatially: in 60 seconds, the environment gently restores the visitor's balance — contactlessly, via controlled light, sound, and directional acoustics.

Market Landscape

Three limitations of existing solutions:

Slow Growth

Applied AI and immersive formats in cultural institutions are developing slowly.

No Correction

Global counterparts (Aura, Tunnel of Sentient Light) visualize the state but do not correct it.

Legal Barrier

Solutions with neurointerfaces and biometrics storage are poorly compatible with personal data protection laws (e.g. 152-FZ).

Audience & Scale

B2B

Cultural institutions: museums, libraries, theaters — new experience format and repeat visits.

B2C

Visitors: city residents aged 25–55 — mindful experience, stress relief, personalization.

B2G

City: administrations and developers — points of attraction and smart architecture.

Target: more than 90,000 institutions, tens of millions of visits per year.

Scenario: 60 seconds

Throughput of one unit — up to 1,000 people per hour.

Four Principles

Active Compensation

The environment does not mirror the state but gently restores balance.

Contactless

No helmets, sensors, or bracelets — diagnostics on the go.

Privacy by Design

Biometrics are not stored, processed strictly in RAM (GPDR/152-FZ compliance).

Scalability

From a compact 10-meter module to a 200-meter space.

Positioning

Comparison by key parameters:

Parameter	Aura	Tunnel of Sentient Light	Neurotunnel
Sensing	EEG & wearable sensors	Stationary cameras	rPPG, contactless
Impact	Visualizes the state	Visualizes the state	Active algorithmic compensation
Privacy	Stores data	Stores data	RAM-only processing
Scale	Fixed format	Fixed format	Adaptive architecture from 10 to 200 m

Business Model

Revenue Sources

Sales of B2B modules, software licensing, service contracts, grants, brand partnerships.

Formats and Estimated Budget

Concept, architectural design, core team, and showcase website are ready.

Compact

10×2.5×3 m — □ 8–15M

Tunnel 20 m

□ 60–100M

Macro format

□ 100–150M

Team & Partners

Alena Levitskaya

Architecture & space. Founder and head of the architectural bureau "Structure". MARCHI lecturer. Member of the Union of Moscow Architects.

Valery Latypov

Technological vision. Engineer-physicist (MEPhI), 20+ years at the intersection of physics, art, and sound. TEDx speaker.

Target Partners

- AB "Structure"
- GES-2
- Tretyakov Gallery, Pushkin Museum
- Sber AI, Yandex
- Russian State Library
- Rosatom

Roadmap & Request

What we are looking for

- Technological expertise and mentorship
- Pilot site
- Funding for the first pilot

Targets by 2027

94% balance restoration

NPS 90+

0 cases of biometrics storage

To be continued_
